OUR RESPONSIBILITY

We use the greatest care to pack all bulbs true to name, but do not assume any responsibility for errors except to replace any bulbs that may prove untrue.

CULTURAL NOTES

Plant any time from April (provided, of course, that ground is in suitable condition) until the middle of June in any good garden soil, from 5 to 6 inches deep. Keep well cultivated and moist. Dig in October and dry the bulbs well before putting in cellar. Be sure to cut the tops off close to the bulbs when dug or lifted in the fall. Bulbs should, of course, be kept from freezing, and, on the other hand, should not be exposed to excessive heat, which would dry them out too much, nor too much moisture, which might induce decay or start growth.

FOR CUT FLOWERS

Cut spike when first bud opens, place in vase of water, and bloom will last several days. To keep blossoms fresh, remove all wilted ones and change water every day or two, cutting one-half inch off from stem whenever water is changed. Keeping in a cool place nights adds greatly to life of bloom.

SPECIAL PREMIUM OFFER

The "Flower Grower," published by Madison Cooper, Calcium, N. Y., we offer to our patrons one year's subscription with a purchase of \$10.00 or over from our catalogue, as it is a most excellent publication, giving detailed instruction and information particularly to amateur growers.
